### Position Description:

A manufacturing engineer position located in the Engineering Department of AES with the intent of providing engineering support in the manufacturing of sheet metal parts, sub-assemblies, assemblies, and related tooling.

### Position Responsibilities:

- Plans and designs manufacturing processes as related to the manufacturing of individual and production quantity details, sub-assemblies, and assemblies.
- Maximizes efficiency by analyzing tooling, workflow, processes, and assembly methods.
- Determines parts and tooling needed in order to achieve manufacturing goals according to the product specification.
- Maintains updated configuration and records for manufactured products as assigned by supervising manager.
- Reverse engineers form and design as required, including possible refurbishment of existing assemblies or vehicles.
- A certain degree of creativity and latitude is expected
- Works under general supervision.
- Typically reports to a supervisor or manager.

### Position Qualifications:

- A Bachelor's Degree in a related engineering field or equivalent experience
- 2-5 years of experience in the field or in a related area.
- Familiar with standard concepts, practices, and procedures within the sheet metal fabrication field
- Proficiency with SolidWorks or equivalent CAD software
- Capable of interfacing with shop personnel, vendors, and subcontractors to troubleshoot and resolve problems.
- Relies on limited experience and judgment to plan and accomplish goals.
- Experience in configuration management, product planning, and government contracts a plus.
